BINGN APPRENTICESHIP PROGRAM

A 3 year, farm-based education in biodynamic agriculture in the Nordic countries (NO/DK/SE/FI)

Take part in the next generation of farming where man, soil, and nature work in harmony

BINGN: Biodynamic Initiative for the New Generation – Nordic

APPRENTICESHIP PROGRAM

starts January/February every year, apply now!

BINGN – a new education

BINGN is a new initiative, which has the goal to inspire, connect and support the new generation of farmers.

Farmers who see the future of farming as a renewed foundation of our society – agriculture with a cultural and spiritual impulse.

BINGN Apprenticeship Program is a new and unique kind of education in agriculture, which will provide you with the skills to take part in or run a farm according to the biodynamic principles. Thereby the program is strongly based on Anthroposophy.

Biodynamic agriculture

Biodynamic agriculture takes organic farming to a deeper level, where you, the farm, the soil, spirit and nature are integral and cooperate as an organic unity.

In biodynamic agriculture the farm is a living organism that is part of its surrounding and place as a whole.

As a student in our Apprenticeship Program, you will learn the most important aspects of running a farm and how to work on a farm as independently as possible.

You will learn by working on selected farms and through seminars following the program. On the farm you will acquire practical skills and a deeper understanding of the farm as a living organism.

The seminars will give you knowledge and inspiration in several topics necessary for a profound understanding and perspective of biodynamic agriculture and its role in society now and for the future.

Topics will include

Agriculture and sociology, arts, soil, plants, animal husbandry, bee keeping, weather and astronomy, machinery, farm economics, farm organism, food processing and more.

Mentoring

Your education will be individually tailored and you will have a mentor who follows you step by step and ensures that your needs as a student will be met.

What we offer

The most comprehensive practical and theoretical education in farming in the Nordic countries.

What we are looking for

BINGN is looking for motivated students who take a particular interest in organic and biodynamic farming as well as ecological concerns, with a perspective on a generative future for both local and global society.

Financing

Food and accommodation will be provided by the farms and the program, and you will receive a small wage as an employee on the farm. There is an apprentice fee of about 15 000 NOK for each year. BINGN can be helpful in finding ways of financing.

Contact

We would like to hear from you!

If this sounds interesting and you want further information, don't hesitate to contact us and we will soon be in touch!

BINGN is part of the biodynamic association in Norway. As a private education BINGN can not offer you an accredited diploma.
